

Foam Plate FR

The Filoform Foam Plate is a closed cell, cross-linked polyethylene foam. The product can be easily shaped with a knife to fit into a floor or duct opening. The foam will prevent humidity to access stations. The foam can be fixed to walls and cables with use of the Filoform Hyperflash tape. Creates an airtight seal to prevent humidity problems. Easy to cut. Flame retardant.

Features

- Prevents ingress of moisture and condensation to reach equipment.
- Improves the climate inside the street cabinets and transformer stations.
- Decrease of the sensitivity to interference of the equipment.
- Extension of the life of the components.
- Quick and easy to apply.
- Easy to remove for local input of additional cables and pipes.
