

Injection Pump GN-E5

The new Filoform injection pumps GN-E5 are used to pump the resin under pressure (± 2 Bar) into injection joints. The injection pump has a continuously variable piston displacement enabling an optimal flow of the resin into the joint.

Features

- Suitable for resin packages type B and C
- Self-centering piston. Avoids piston seizure
- Fold-out handle for piston rod retraction
- Cylinder and cover with a PTFE coating thus avoiding adhesion of the resin
- Ergonomic hand grip
- 6 month warranty

More info

Recommended use

In order to achieve a proper filling of the cable joint, allow the resin to flow into the injection joint with each pumping stroke. For a long pump life, clean the piston and the interior of the cylinder once a week and apply Luborsil silicone lubricant (Filoform art.nr. 80800)
