

3D gauze

FiloSlim 3D Gauze rolls are used for the construction of the FiloSlim cable joints or the Taped resin injection joint. Thanks to the special 3D weave of the gauze, optimal insulation distance is created with just a few wraps.

The open structure of the gauze ensures a smooth flow and an even distribution of resin. The gauze can be filled with resin either manually or with an injection pump. The 3D gauze roll's size ensures that the earth shield is completely insulated and the entire joint is fully wrapped.

Features

- Thanks to its special 3D structure, fewer wraps are needed thus saving on labour time.
- The roll's small diameter simplifies wrapping in cable beds.
- The roughness of the weave prevents it slipping from the gauze belt.
- The flexible gauze hugs the contours of the cable connections and ensures minimal resin usage.
- Contributed to a proper flow of the resin into the joint
- White colour, for a visible contrast with the resin
- Not hygroscopic
- Not sharp to the hands

Specifications

| | |
|----------------|---------------|
| Material | polypropylene |
| Thickness | 2,25mm |
| Width | 50mm |
| Length | 2,3m |
| Mesh structure | 3D warp knit |
